No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

# Contents of Volume 104

## Number 1, July 1993

1 **Top Reviewers in 1992–1993**
Joseph A. Burns

2 **Groundbased Imaging Spectroscopy of Mars in the Near-Infrared: Preliminary Results**
James F. Bell III and David Crisp

20 **An Assessment of Volatile Release from Recent Volcanism in Elysium, Mars**
J. B. Plescia

33 **An Upper Limit on Neutral Calcium in Mercury's Atmosphere**
A. L. Sprague, R. W. H. Kozlowski, D. M. Hunten, and F. A. Grosse

38 **The Distribution of Hydrocarbons in Neptune's Upper Atmosphere**
Roger V. Yelle, Floyd Herbert, Bill R. Sandel, Ronald J. Vervack, Jr., and Thomas M. Wentzel

60 **Initial Development of Eddies in High-Speed Zonal Flow: One Interpretation for NTB Activity of Jupiter**
Tadashi Asada, Peter J. Gierasch, and Toshio Yamagata

69 **Spectral Distinctions between the Leading and Trailing Hemispheres of Callisto: New Observations**
Wendy M. Calvin and Roger N. Clark

79 **Mass Spectrum and Velocity Dispersions during Planetesimal Accumulation. II. Fragmentation**
P. Barge and R. Pellat

97 **Secondary Processing of Chondrules and Refractory Inclusions (CAIs) by Gasdynamic Heating**
M. Podolak, D. Prialnik, T. E. Bunch, P. Cassen, and R. Reynolds

110 **Local Suppression of Diffraction Effects to Detect Dim Stellar Companions**
Donald W. Davies

118 **An Experimental Study of the Organic Molecules Produced in Cometary and Interstellar Ice Analogs by Thermal Formaldehyde Reactions**
W. A. Schutte, L. J. Allamandola, and S. A. Sandford

138 **Spectral Diversity among the Nuclei of Comets**
Jane X. Luu

*Notes*

149 **Serendipitous Images of Methanol in Comet Levy (1990 XX)**
Susan Hoban

152 **Effect of Plasma Ion Bombardment on the Reflectance of Io's Trailing and Leading Hemispheres**
N. J. Sack, R. A. Baragiola, and R. E. Johnson

*Erratum*

155 **Volume 100, Number 2 (1992): Mark Allen, Yuk L. Yung, and G. Randall Gladstone, "The Relative Abundance of Ethane to Acetylene in the Jovian Stratosphere," pp. 527–533**

## Number 2, August 1993

157 **The Anomalous Molecular Abundances of Comet P/Wolf–Harrington**
David G. Schleicher, Schelte J. Bus, and David J. Osip

167 **Multiple Scattering of Light in a Spherical Cometary Atmosphere with an Axisymmetric Dust Jet. II. Image Simulation**
Kenneth M. Chick and Tamas I. Gombosi

185 **$H_2O^+$ Production Rates of Comets Austin 1990 V and P/Halley 1986 III**
D. Schultz, F. Scherb, and F. L. Roesler

197 **The Velocity Distribution of Cometary Hydrogen: Evidence for High Velocities?**
Michael E. Brown and Hyron Spinrad

206 **CCD Imaging of Comet Wilson (1987VII): A Quantitative Coma Analysis**
Rita Schulz, Michael F. A'Hearn, Peter V. Birch, Craig Bowers, Mark Kempin, and Ralph Martin

226 **Physical Mechanism of Comet Outbursts: An Experimental Result**
William K. Hartmann

234 **CCD Photometry of 2060 Chiron in 1985 and 1991**
Robert L. Marcialis and Bonnie J. Buratti

244 **Orbital Resonances and Poynting–Robertson Drag**
S. J. Weidenschilling and A. A. Jackson

255 **Asteroid Orbit Determination Using Bayesian Probabilities**
Karri Muinonen and Edward Bowell

280 **Giordano Bruno, the June 1975 Meteoroid Storm, Encke, and Other Taurid Complex Objects**
Jack B. Hartung

291 **Microscopic Iron Metal on Glass and Minerals—A Tool for Studying Regolith Maturity**
C. C. Allen, R. V. Morris, H. V. Lauer, Jr., and D. S. McKay

301 **Chronology, Eruption Duration, and Atmospheric Contribution of the Martian Volcano Apollinaris Patera**
Mark S. Robinson, Peter J. Mouginis-Mark, James R. Zimbelman, Sherman S. C. Wu, Karyn K. Ablin, and Annie E. Howington-Kraus

324 **First Detection of Ozone in the Middle Atmosphere of Mars from Solar Occultation Measurements**
J. E. Blamont and E. Chassefière

*Note*

337 **3- to 13-$\mu$m Spectra of Io**
Keith S. Noll, H. B. Hammel, Leslie Young, Joanna Joiner, J. Hackwell, D. K. Lynch, and R. Russell

*Book Review*

341 ***Exploration of the Solar System by Infrared Remote Sensing*. By R. A. Hanel, B. J. Conrath, D. E. Jennings, and R. E. Samuelson**
H. B. Hammel, S. J. Bus, J. L. Elliot, and C. B. Olkin

343 ***Author Index for Volume 104***

NOTICE

The Subject Index for Volume 104 will appear in the December 1993 issue as part of a cumulative index for the year 1993.

# INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of our solar system or extrasolar systems are welcome. The journal generally does not publish papers devoted **exclusively** to the Sun, the Earth, celestial mechanics, meteoritics, or astrophysics. Reviews, historical papers, and manuscripts describing spacecraft instrumentation may be considered, but only with prior approval of the Editor. An entire issue of the journal is occasionally devoted to a single subject, usually arising from a conference on the same topic. ICARUS does not publish meeting announcements or general notices. The language of publication is English. In special cases, with the Editor's approval, short abstracts of papers can also appear in French, German, or Russian.

All papers are reviewed, generally by two independent referees. Authors will usually be asked to respond to criticisms and suggestions by the referees prior to publication; at the Editor's discretion, reviewers may be consulted about resubmitted manuscripts. Authors are invited to give recommendations pro or con about potential reviewers; the Editor may use these to guide the selection of referees. If authors so request in their cover letters, manuscripts will be handled anonymously during the refereeing process.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Furthermore, any person cited as the source of a personal communication should have approved such citation; in particular, written documentation must be sent when the manuscript is submitted if the personal communication is crucial to the arguments of the submitted paper, or critical of another's work, or controversial. For the benefit of the reviewers, three (3) copies of all significant references cited in the manuscript as *submitted* or *in press* must accompany the paper.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal. Articles and any other material published in ICARUS represent the opinions of the authors and should not be construed to reflect the opinions of the Editor or the Publisher.

There are no page charges. However, authors will be charged for color reproduction or foldout pages; the publisher will provide an estimate of these costs on request. Fifty **reprints** of each paper will be furnished gratis to the author and additional reprints may be purchased.

**Manuscripts.** *Four copies* of the manuscript, including figures, tables, etc., should be submitted to:

Editorial Office, **Icarus**
Space Sciences Building
Cornell University
Ithaca, New York 14853-6801

Telephone: 607-255-4875
Fax: 607-255-6354
Telex: WUI 6713054
Electronic mail:
CUSPIF::ICARUS (on DECnet)
icarus@astrosun.tn.cornell.edu (on internet)

Authors should retain the original typescript. At least one set of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and *double-spaced throughout,* including references and footnotes. Number each page of the manuscript. Include on the first page the title of the paper and the name(s) and affiliation(s) of the author(s), including mailing address(es), telephone number(s), fax number(s) [or telex number(s) if fax is not available], and electronic mail address(es). At the bottom of the first page note the number of manuscript pages, figures, and tables; also list up to five key words (topics), taken from the journal's index, that classify the subject of the paper. On the second page indicate a proposed running head of not more than 60 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. After the main text, give Appendixes, Acknowledgments, references, tables, figure captions, and figures, in that order. Places where figures and tables are to appear in the published paper should be marked in the margins of the manuscript. For the review process authors may submit manuscripts in which figures and tables appear in the manuscript proper.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than being displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg $cm^{-2}$ $sec^{-1}$, not erg/$cm^2$ sec).

**Tables and Figures.** When described in the body of the text, a table should be referred to as Table X, an equation as Eq. Y, and a figure as Fig. Z (use these abbreviations everywhere except at the beginning of a sentence).

*Tables* are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, *double-spaced,* on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings. Unusually elaborate tables should be prepared to allow them to be reproduced in the journal directly without typesetting.

*Figures.* At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line glossies should be carefully drafted, no larger than 22 × 30 cm. Original drawings, laser prints, or standard glossy photographic reproductions are acceptable. *Authors should design figures so that they will fit one or two columns of print. Care should be taken to assure that computer-drawn figures use the journal's*

*space efficiently*. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough to still be legible after reduction. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. *Each figure should be identified with the author's name and figure number.* All figures, whether line drawings or halftones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

**Literature Citations.** *Careful compliance with the instructions for the preparation of the list of references is required;* manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

*Literature citations in the text* should be in one of the following forms: Sridhar and Tremaine 1992 (for two authors); Farinella *et al.* 1990 (for three or more authors); Allison 1990, p. 198 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Cruikshank *et al.* 1991a, 1991b).

*Literature citations in the bibliography* should be *listed alphabetically* according to the surname of the (first) author. Journal references should contain the *names and initials of all authors, the year, the title of the article, and standard abbreviation of the journal, the volume number, and the first and last page numbers*. Titles of journals and books should be in italics, volume numbers in boldface. (In a typed manuscript, indicate italics by single underlining and boldface by wavy underlining.) Below are shown examples of the proper reference forms for a book, a journal article, and a book chapter, respectively.

LINDZEN, R. S. 1990. *Dynamics in Atmospheric Physics*, Cambridge U. Press, Cambridge.

SPENCER, J. R. 1990. A rough-surface thermophysical model for airless planets. *Icarus* **83,** 27–38.

VEVERKA, J., R. H. BROWN, AND J. F. BELL 1991. Uranus satellites: Surface properties. In *Uranus* (J. T. Bergstralh, E. D. Miner, and M. S. Matthews, Eds.), pp. 528–560. Univ. of Arizona Press, Tucson.

**Guidelines for Electronic Submission of Manuscripts.** This procedure pertains to the submission and review process only. Authors who wish to submit a disk with their accepted manuscript should read the section on Personal Computer Disks below in this Information for Authors.

(i) For electronic transmission, manuscripts *must* be prepared in either plain TeX or LaTeX or as a PostScript file.

(ii) Line art graphics and halftone images may be submitted as long as they are embedded within a PostScript file. Halftone images should be less than 800 × 600 pixels for the purpose of review.

(iii) Before transmitting the files, print out your own copy to ensure that all formatting is appropriate. The Editorial Office will not be responsible for correcting format errors. If we cannot print a file, the file will be returned to the author for correction and/or the author will be asked to submit hard copy of the manuscript by conventional means.

(iv) Authors must keep the number of files necessary to transmit a complete manuscript to the absolute minimum. In the header, be sure to identify the files that will be transmitted; the number of pages, figures, etc.; and the type of files (TeX, LaTeX, or PostScript). An advance mail message that a manuscript is being transmitted will be appreciated.

(v) Electronic manuscripts should be sent to: icarus@astrosun.tn.cornell.edu (on internet); NSI/DECnet users may send their files to: east::"icarus@astrosun.tn.cornell.edu"

(vi) Manuscripts that contain black and white photographs or color art must be submitted through the postal system.

**Guidelines for Submission of "Notes."** Papers on especially topical subjects will be given unusually rapid handling if they satisfy the following limitations on length:

(i) Manuscripts should be typed double-spaced and should be no longer than nine (9) pages, including a very brief abstract of one or two sentences.

(ii) The sum of figures and tables should be less than, or equal to, two.

We expect that ICARUS will publish "Notes" within four (4) months of submission, if no revision is required. We will try to complete refereeing and editorial handling in less than one month. In order to speed publication, proofs of "Notes" will be proofread only at Academic Press.

**Proofs** will be sent to the corresponding author. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will **not** be printed, but will help to avoid costly author's corrections in proof. Authors will be charged for excessive alterations in proof.

**Personal Computer Disks.** Manuscripts may be submitted to ICARUS on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: 619 699-6415; fax: 619 699-6800).

# Today's Advances are Tomorrow's Technology.
## *Get the Facts.*

## ENCYCLOPEDIA OF PHYSICAL SCIENCE AND TECHNOLOGY

SECOND EDITION

*edited by*
**Robert A. Meyers**

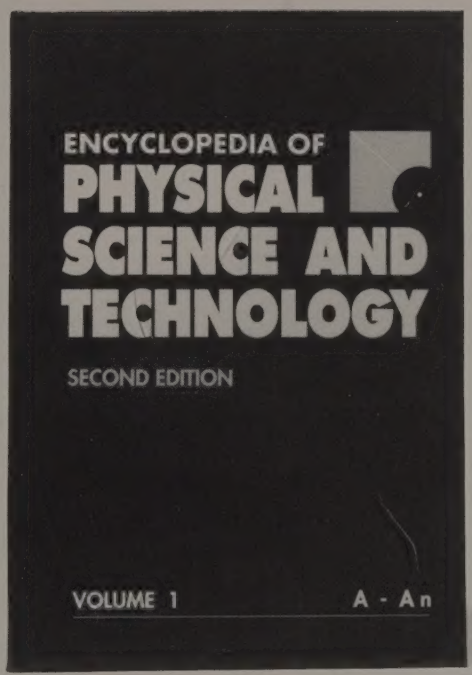
*From the Reviews of the First Edition*

*"Comprehensive, current, easy to use, and authoritative....It exceeds all of its goals of providing a scholarly encyclopedia covering the physical sciences, mathematics, and engineering. It is highly recommended for large public libraries with a science and technology division, academic libraries, and special libraries with an interest in science and engineering."*
—BOOKLIST/REFERENCE BOOKS BULLETIN

*"The outstanding feature of this work is the currency of the material covered. This reference tool will serve as a research aid for scholars and advanced students and will find use in academic, special and large and medium-sized public libraries."*
—THE NEW YORK PUBLIC LIBRARY

*"I expect it to become a standard in every library attempting to represent broadly the fields of science and technology."*
—THE LOS ANGELES PUBLIC LIBRARY

*"This encyclopedia will be a very useful and needed addition to the literature of the physical sciences and technology."*
—AMERICAN REFERENCE BOOKS ANNUAL



A massive revision of the distinctive **Encyclopedia of Physical Science and Technology**, this **Second Edition** includes 155 new articles that fill three volumes—a total of 2,400 additional pages. This eighteen-volume work maintains the high quality of the original edition, praised by both the Los Angeles and New York Public Libraries. Featuring longer and more complete articles than other similar works and specifically covering all the physical sciences, this encyclopedia deserves a place on every library's bookshelf.

### *Key Features*

- Articles are arranged alphabetically for easy access
- Each entry begins with a detailed table of contents, a glossary of unusual terms, and a concise definition of the topic, followed by an in-depth presentation
- Extensive cross-references
- Each article has passed a review by its author's peer group
- 92% of the articles have been revised and updated
- 155 articles have been added

**Eighteen-Volume Set**
**1992, 14,080 pp., $2500.00/ISBN: 0-12-226930-6**

| *Comparison of the First and Second Editions* | *First Edition* | *Second Edition* |
|---|---|---|
| Volumes | 15 | 18 |
| Articles | 550 | 705 |
| Pages | 11,651 | 14,080 |
| Bibliographic Entries | 5,000 | 6,500 |
| Figures | 6,600 | 8,500 |
| Tables | 1,400 | 1,800 |
| Illustrations | 5,500 | 8,200 |
| Glossary Entries | 6,800 | 8,700 |
| Index Entries | 55,000 | 70,000 |
| Chemical and Mathematical Equations and Algorithms | 13,850 | 17,625 |

### *Subject Areas Covered*

| | |
|---|---|
| 12% | Aeronautics, Materials, and Engineering |
| 8% | Astronomy and Space Technology |
| 11% | Atmospheric and Earth Sciences |
| 14% | Computer Science and Telecommunications |
| 8% | Electronics |
| 8% | Mathematics |
| 1% | Military |
| 16% | Physical, Organic, Inorganic, and Environmental Chemistry |
| 6% | Physics |
| 6% | Power, Propulsion, and Nuclear Technology |

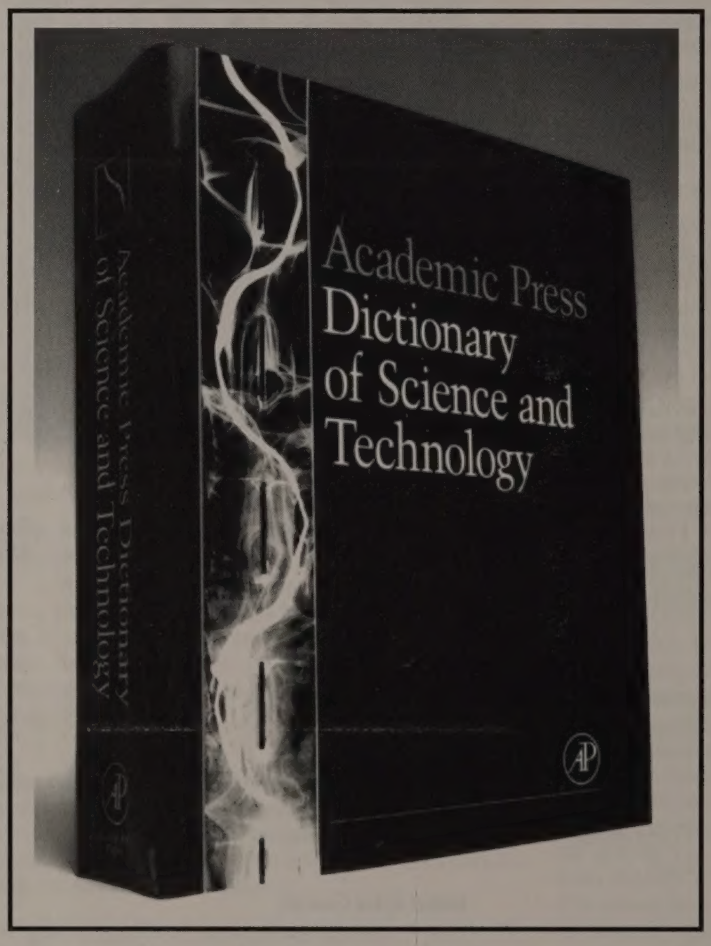
# The New Standard of Excellence.

The most comprehensive, authoritative scientific dictionary now available, the **Academic Press Dictionary of Science and Technology** offers you, in one volume, the largest collection of scientific terms available in any single reference source. Containing complete, practical definitions for 133,000 words (not counting abbreviations), the **Dictionary** covers key terminology in 124 fields of science and technology—including Molecular Biology, Computer Science, Physics, Engineering, Chemistry, Ecology, Behavior, Geophysics, Veterinary Science, Mathematics, Astronomy, Biotechnology, and numerous other fields.



September 1992, 2432 pp., $115.00/ISBN: 0-12-200400-0

## Key Features Include

- 133,000 fully-defined entries—more than any other scientific dictionary
- Complete coverage of 124 fields of science ranging from Acoustics to Zoology
- Single volume, large 8½" x 11", double-column format for easy access
- Cutting-edge definitions in such dynamic fields as Artificial Intelligence and Biotechnology
- More medical terms than any other general scientific dictionary now available
- More coverage of subfields of medicine, including rapidly growing disciplines such as Oncology, Radiology, Hematology, Cardiology, and Toxicology
- More than 2000 detailed illustrations and technical photographs, including 24 pages of color plates
- Pronunciation guides for difficult or phonetically irregular terms
- Complete appendix of frequently consulted scientific data, including the periodic table, standard weights and measures, and a Chronology of Science

Another distinctive feature of the **Dictionary** is its 124 "Windows." These boxed essays are written by leading scientists in the field, such as Michael DeBakey, Stephen Jay Gould, Joshua Lederberg, Arthur Kornberg, Linus Pauling, Roger Revelle, and Rosalyn Yalow, each of whom offers a brief introduction to his or her area of expertise. Presenting practical, concise information on each discipline, the "Windows" help make the terminology easier to understand.

## The Only Source You Need for Scientific Terminology

If your library, institution, or corporation serves practicing scientists and professionals in any scientific field—engineers, computer professionals, and other technical personnel; high school, college, and graduate students; writers, researchers, and educators working with a scientific vocabulary; or general readers interested in science—then the **Academic Press Dictionary of Science and Technology** is the only scientific dictionary you need. The definitions are clear and accessible to the non-specialist, yet provide all the technical information the specialist requires.

Set a new standard of excellence by adding the **Academic Press Dictionary of Science and Technology** to your reference collection.
*It will become your reference of choice.*
